Accelerate Your Insurance Transformation:

Launch New Products Faster and Speed Up Time-to-Market

Fadata's integrated end-to-end core platform for Property & Casualty insurers, INSIS, is a robust SaaS solution that accelerates digital transformation. It covers the most extensive P&C product lines and supports each step of the insurance lifecycle.

Property and Casualty insurers are under increasing pressure due to regulatory changes, market fluctuations, and intense competition. Legacy systems still in place are making it difficult to scale and outdated manual processes are impeding innovation.

Disconnected systems, not only expensive and inflexible, result in error-prone and slow claims handling at a time when customers are demanding faster and more convenient experiences.

Fadata is a leading insurance software provider with over 30 years of deep industry and tech expertise and offers insurers the most extensive and comprehensive functionality on the market. We provide a robust SaaS infrastructure to empower insurers with real-time data management, facilitating personalized customer experiences and process optimization.

Our highly configurable INSIS platform ensures rapid time to value, allowing insurers to adapt and react to market needs and launch new products quickly. Fadata ensures fast implementations and seamless onboarding, providing a smooth transition and immediate business impact.

Seamless upgrades and security in the cloud infrastructure ensure data integrity, operational continuity, and minimal disruption during updates.

Rapid product development and deployment using a sophisticated product designer with reusable product repositories and Versioning and change control, allowing insurers to quickly design and launch customized insurance products tailored to individual customer needs, improving customer retention and satisfaction.

Eliminate data duplication with unique identification for all parties and insured objects, ensuring data accuracy, consistency, and streamlined processes.

Flexibility to seamlessly support unique and automated processes across diverse product lines, enabling you to tailor solutions to meet the specific needs of various insurance offerings.

Automate underwriting and claims with an intelligent rules engine integrated into a BPM tool, reducing manual effort and enabling transactions to proceed without human intervention.

Integrate real-time data from/to third-party sources to ensure compliance with evolving regulatory demands and enable more informed decision-making.
